

# Task 4: Growth Copywriting & Experiment Measurement Plan

Rokomari.com Growth Analytics Initiative

Prepared by: Sajeeb The Analyst | Date: April 2026

## 1. Persuasive Product Description Rewrites

Leveraging behavioral psychology principles to enhance product appeal and drive higher conversion rates across Rokomari's product catalog.

| Product Category         | Revised Persuasive Copy                                                                                                                                                                             | Psychology Applied                      |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| Bestselling Novel        | Join over 100,000 readers who have discovered this literary masterpiece. A #1 Rokomari Bestseller for 12 consecutive weeks. Don't miss out; current stock is nearly exhausted.                      | Social Proof, Authority, Scarcity       |
| Tech Learning Kit        | Master Python with the same curriculum trusted by developers at Google and Meta. Build real-world projects today. Includes exclusive lifetime access to our professional developer community.       | Authority, Aspiration, Exclusivity      |
| Children's Education Set | Give your child the competitive advantage they deserve. Recommended by 2,500+ educators nationwide. Limited edition bundle; save 20% if you order within the next 48 hours. Stock running out fast. | Authority, Urgency, Loss Aversion, FOMO |

## 2. Call-to-Action (CTA) Button Variations

Three distinct CTA variations designed to overcome purchase hesitation and maximize click-through rates.

- "Get My Copy Now"**  
First-person language ("My") creates psychological ownership and personal connection through the Endowment Effect, increasing perceived value before purchase.
- "Join the 50K+ Community"**  
Leverages the Bandwagon Effect and Social Proof by highlighting the large number of satisfied customers, reducing perceived purchase risk and normalizing the buying decision.
- "Unlock Savings & Start Reading"**  
Emphasizes immediate dual benefits (savings + access) and minimizes the "pain of paying" by highlighting value gains over cost, employing loss aversion psychology.

### 3. Experiment Measurement Framework

Comprehensive metrics and success thresholds to validate the impact of copywriting and CTA variations on user behavior and business outcomes.

| Key Metric                | Definition & Calculation                                                                                                                   | Success Threshold                        |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| CTR                       | Percentage of users clicking the CTA button divided by total users viewing the page.                                                       | +15% Increase                            |
| Add-to-Cart Rate          | Percentage of users adding the product to their shopping cart after viewing the product description.                                       | +10% Increase                            |
| Micro-Conversions         | Secondary engagement: clicks on "Read Sample," "Customer Reviews," "Related Products," or wishlist additions.                              | Higher engagement score and time-on-page |
| Average Order Value (AOV) | Total revenue from all orders ÷ total number of orders during test period. Tracks if persuasive product bundling increases customer spend. | +5% Increase                             |

### 4. Statistical Validation & Testing Methodology

#### A/B Testing Protocol

Randomly assign incoming traffic to control (original) and treatment (new copy) variants at a 50/50 split. Maintain equal traffic distribution across all variants to ensure statistical independence and valid comparisons.

#### Sample Size & Duration

Minimum test parameters: 10,000 sessions minimum or 2 weeks duration, whichever comes first. This ensures sufficient statistical power (80%) and reduces the risk of false positives.

#### Session Recording & Behavioral Analysis

Deploy Hotjar session recordings to capture user interactions with the revised product descriptions. Analysis focus: scroll depth on description sections, time spent reading, and emotional cues (hesitation points) before CTA engagement.

#### Statistical Significance Testing

Apply Chi-Square ( $\chi^2$ ) goodness-of-fit test or Z-test for proportions ( $p\text{-value} < 0.05$  threshold) to ensure results are statistically significant and not due to random chance. Confidence level: 95%.

### 5. Risk Assessment & Contingency

- **Best Case:** Variant B outperforms by 12-15%, rolled out site-wide, driving 5-8% revenue increase across product category.
- **Worst Case:** Variant B underperforms by 5%, automatic rollback to control variant within 48 hours, minimal revenue impact.
- **Inconclusive:** No statistical significance detected, extend test to 3 weeks or analyze qualitative Hotjar data for optimization insights.

### **Success Criteria**

This experiment will be deemed successful if at least 2 of the 4 primary metrics (CTR, Add-to-Cart, Micro-Conversions, AOV) achieve their designated success thresholds with  $p < 0.05$  statistical significance.
